

Sean Cunningham

(414) 791-7326 • scunningham77@proton.me

PROFESSIONAL SUMMARY

Frontend engineer with 12+ years who does my best work when I can put something real in front of people early and let their feedback shape it. I own features end-to-end – talking with users, sketching flows in Figma, prototyping in code, and iterating toward polished UI – and build reusable components other engineers can rely on. Deep TypeScript expertise, primarily Angular professionally, with React from personal projects (including a published mobile app). AI-first in daily practice (GitHub Copilot certified), which makes the build–learn loop faster than ever.

RELEVANT SKILLS

- **Frontend:** TypeScript, JavaScript, Angular, React, RxJS, Tailwind CSS
- **UX & Product:** Figma prototyping and hands-on UI/UX design work; translating user feedback and behavioral data into shipped interface decisions; close collaboration with product and design on requirements
- **Web Performance:** Systematic Core Web Vitals optimization (Lighthouse/PageSpeed), image/font optimization, code splitting
- **Architecture & Ownership:** Leading architecture and component design decisions across multiple applications and major features, including redesigning unwieldy components into dynamic, reusable patterns other engineers build on; full-cycle ownership from design through production
- **Testing:** Jest, Cypress
- **AI Tools:** GitHub Copilot Certified

PROFESSIONAL EXPERIENCE

Senior Front End Developer | Railroad19 | September 2021 – October 2026

- **Translated complex user workflows into intuitive interfaces** that reduced task completion time from 10+ minutes to 20 seconds for thousands of quarterly orders, directly addressing user pain points identified through stakeholder feedback and earning recognition from multiple Senior VPs at NBCUniversal
- **Built responsive dashboard interfaces** that transformed complex ad sales data into clear visualizations, enabling users to quickly identify and act on \$6.6M in mismarked orders

- **Collaborated closely with product managers** to iterate on features based on user feedback, learning Figma to create detailed mocks that ensured alignment before dedicating development resources

Senior Software Developer | DCI Marketing | January 2016 – September 2021

- **Led frontend development** for full redesign of subarudrive.com, creating responsive interfaces that integrated seamlessly with legacy backend systems while delivering modern user experiences
- **Optimized web vitals and performance metrics** by double digits through systematic image/font optimization and code splitting, improving Core Web Vitals scores as measured by Lighthouse and PageSpeed
- **Architected content injection system** that empowered non-technical editors to manage dynamic content themselves, eliminating the technical bottleneck that had been slowing down content updates
- **Authored comprehensive technical documentation** covering full-stack architecture, deployment processes, and development workflows

Software Developer | RF Technologies | August 2011 – January 2016

- **Led adoption of AngularJS** from previous technologies, demonstrating ability to evolve with technology shifts
- **Established development processes** using then-modern tooling such as Gulp and LESS
- **Contributed to application development** across the full stack
- **Worked directly with customers** to coordinate hardware/software solution implementation, bringing real-world user feedback to the engineering team to inform product decisions

EDUCATION

- Master of Arts, Medieval Studies | Western Michigan University | 2011
- Bachelor of Arts, Latin and Medieval Studies; Minor in Linguistics | St. Olaf College | 2007

RELEVANT PERSONAL DEVELOPMENT

- **Mobile App Development:** Launched hybrid mobile apps “[Barenziah Tracker](#)” and “[SelecQuest](#)” using Ionic-React
- **Game Development:** Created games using Unity and C# as personal projects
- **GitHub:** Regular contributions at github.com/scunningham777
